PRICE 2/6 JULY 1962

Storage Pumps and Pump-Turbines for Hydraulic Power Stations

Sulzer three-stage high-pressure storage pump in Motec Power Station of Gougra AG Switzerland

Delivery 3,260 lit./sec., head 628 metres, power input 30,800 h.p.

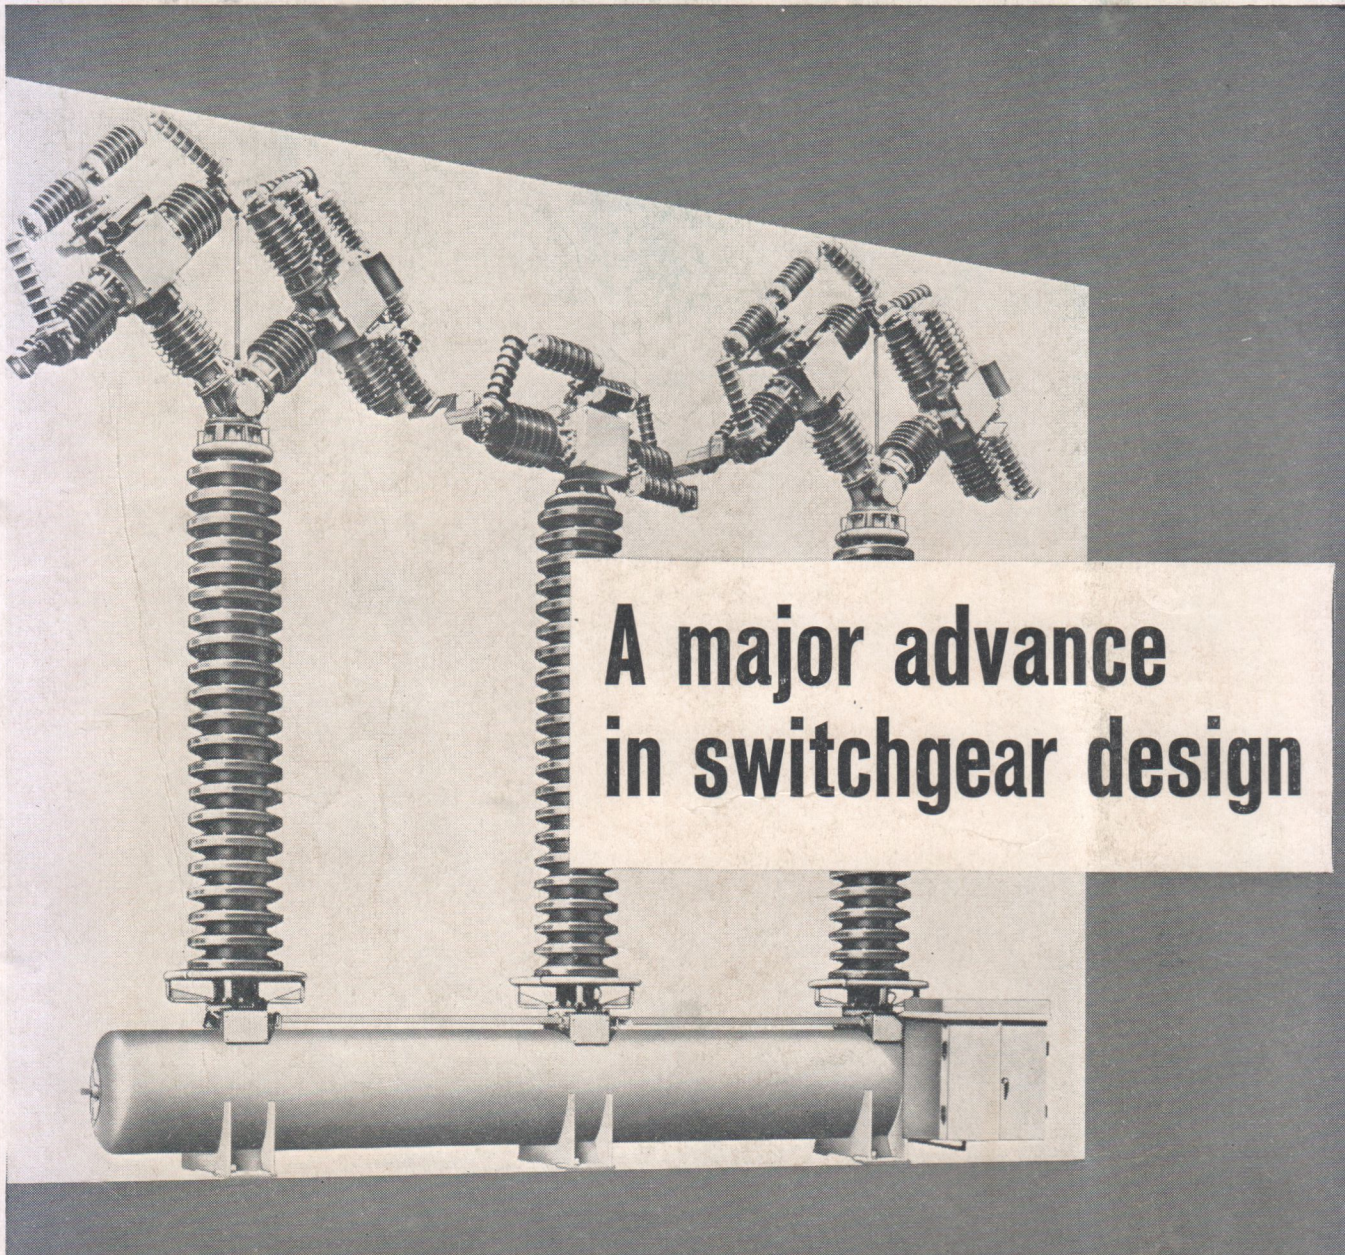

Sulzer Brothers Limited,
Winterthur, Switzerland

field pump-turbines in collaboration with the English Electric Co., London

A major advance in switchgear design

*A single phase 400 kV
35,000 MVA, air-blast
circuit-breaker, Frame 'r' TY10B*

The 'ENGLISH ELECTRIC' **Frame 'r'** air-blast breaker is designed to meet the highest ratings likely to be required for many years to come. The range covers voltages from 132 kV up to 650 kV (projected), current ratings up to 4000 amp, and breaking capacities up to 50/60 kA.

High performance is achieved by:

- Permanent pressurization throughout
- Full operating pressure available at contacts
- Mechanical operation up to last stage before exhaust valve
- Lightness of moving parts

Accessibility of component parts allows easy maintenance and inspection. No external 'make' switch to be affected by weather conditions.
